

RENEGADE SOLUTIONS

Renegade Solutions, LLC is a woman-owned small business specializing in SCADA control systems, industrial automation, and process control design within the water and wastewater industry. Founded in 2022 by Heather Heltzinger, a licensed wastewater operator, Renegade Solutions was built on the principle of providing innovative, cost-effective solutions for municipalities and townships. With a focus on designing and implementing control systems that simplify operations, the company has quickly earned a reputation for its ability to tackle complex projects with a personal touch.

One of the company's core strengths lies in its operator-first approach. Being licensed operators themselves, the Renegade team understands the challenges faced by plant operators and integrates this knowledge into their control designs. This hands-on expertise allows the company to create custom HMI and PLC programming that not only meets regulatory requirements but also enhances the efficiency and ease of day-to-day plant operations. This tailored approach has made Renegade Solutions a trusted partner for municipalities seeking long-term, practical solutions for their water and wastewater facilities.

Renegade Solutions prides itself on its collaborative approach, forming strategic partnerships with small local businesses and large corporations alike. The company has worked with major clients such as Aqua America and smaller municipal authorities like Womelsdorf Sewer Authority and Shoemakersville Water Authority. These partnerships extend to engineering firms like Systems Design Engineering, Inc., allowing Renegade to offer comprehensive services from project conception to execution. Whether it's a complete SCADA upgrade or a maintenance program, the company provides unmatched service with an emphasis on keeping projects on time and within budget.

In addition to its technical expertise, Renegade Solutions is dedicated to addressing one of the industry's biggest concerns—cybersecurity. The company's new partnership with Costream, a customized software solution that pairs asset management with advanced cybersecurity protocols, demonstrates its commitment to staying ahead of technological challenges while offering clients peace of mind.

Despite its rapid growth, Renegade Solutions remains grounded in its mission to serve smaller communities. Understanding the unique needs of municipalities with limited budgets, the company delivers affordable, high-quality solutions that enable towns to comply with state and federal water quality

standards without compromising efficiency. This focus on the customer experience has made Renegade Solutions a sought-after service provider in Eastern Pennsylvania and beyond.

Renegade Solutions is committed to giving back to the industry through active involvement in various professional organizations. Heather Heltzinger, the company's founder, currently serves as President of the Eastern Pennsylvania Water Pollution Control Operators Association, and the company is a member of numerous other local and statewide industry associations.

Looking to the future, Renegade Solutions is preparing to roll out a new maintenance program that will provide ongoing support to municipalities, ensuring their control systems remain efficient and compliant. With its combination of technical innovation, customer-first mindset, and commitment to the industry, Renegade Solutions is poised for continued success as a leader in the water and wastewater control systems market.
