New Cyber Threats Require New Solutions

Provided by HonIsT Solutions

My name is Andrew Sonon, owner of HonIsT Solutions. As you may have recently heard, Kaseya – a company who makes software for IT service providers, announced that it was recently hit with a sophisticated cyberattack over the July 4th Weekend. The incident, which is currently under investigation by the FBI, has wreaked havoc on thousands of businesses across the country and is gaining the attention of the Government. This has been one of the worst cyber-attacks to have hit the IT Industry thus far!

In the aftermath of this devastating breach, not only have hundreds of IT service providers been affected but

thousands of businesses being managed by these specific IT Providers. **Supply chain attacks are the scariest type of attack we have seen.** When the software you trust to help you becomes the virus, we are in terrifying times. It is unfortunate that Kaseya and many other businesses have fallen victim due to this cybersecurity breach. I have good news for you – we do not need to sit back and “hope it doesn’t happen to us.”

This begs the biggest question ... Have you been affected and are you protected from this type of attack?

If your IT provider has not had a conversation with you recently about cyber security, you are likely to be

vulnerable to the new cyber threats we are seeing in 2021. Cyber security requires multiple layers of protection. The tools of the past need to be supplemented to stop these threats in their tracks. At HonIsT Solutions, we have completely revamped how we go about protecting clients and we’re actively deploying new solutions and educating companies and their staff on how to protect themselves. No one wants to be the reason that their company is not able to operate for days or weeks after an attack. It is vitally important to implement new tools and provide your staff the education that they need.

To have a quick chat to get your cyber security evaluation started,

type this address in your web browser: www.bit.ly/honistcyber and schedule a quick call.

HonIsT Solutions operates as a managed service provider specializing in cyber security, networks, communication systems, and system infrastructure for small and medium sized businesses. We have been serving Berks, Lancaster, Montgomery, and Lehigh County businesses since 2017.
